Problem

Slip & fall accidents are exceedingly common in high-traffic public areas: hotels, restaurants, office buildings, grocery stores and shopping malls. Accidents of this nature are the leading cause of serious physical injuries to customers and employees that result in costly legal claims to the management and property owners. Effective slip & fall accident prevention methods help you avoid potential legal liability and identify your company as one that cares about customer and employee safety.

Solution

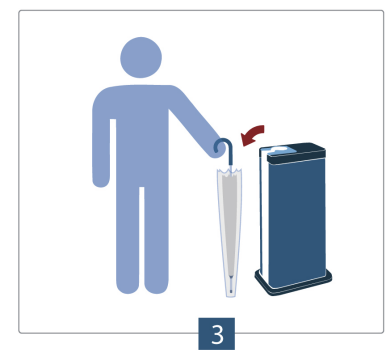

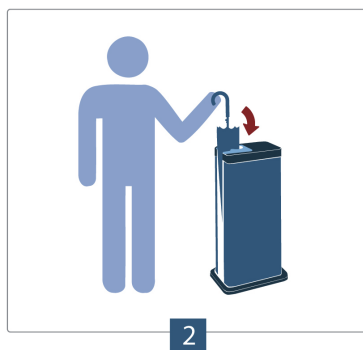

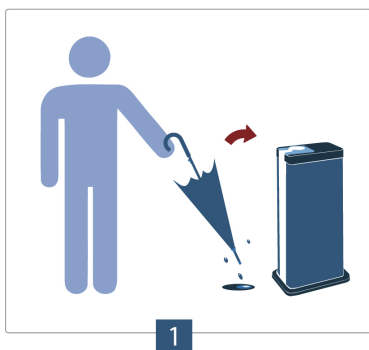

DropStopper wet umbrella bag dispenser helps prevent slip & fall accidents. The dispenser is placed at the building entrance for wet umbrellas to be inserted and then pulled out wrapped in a plastic bag. As a result, dripping water stays in the plastic umbrella bag, ensuring your entrance area stays dry and safe. DropStopper is a simple, yet effective solution to use in high-traffic areas.

Did you know?

- Slip & fall accidents account for 1 million hospital emergency room visits in North America annually.
- The average liability award for a slip & fall injury runs from \$60,000 to \$100,000 per claim.
- It is estimated that workers' compensation and medical expenses associated with slip & fall accidents cost businesses \$70 billion annually.

WARNING: DROPSTOPPER COULD SAVE YOU MILLIONS IN INSURANCE COSTS

Legal Liability :

An occupier may be held liable for slips, trips and falls if they fail to provide a reasonable standard of care in keeping their premises from hazards.

The best way to avoid liability is by diligently keeping premises free of hazards. This diligence, in combination with consistent documentation, will be one of the most effective ways to defend your organization against a claim or lawsuit, should one occur.
